

# YIZHUO ZHAI

900 University Ave, Riverside, CA 92521

(+1) 951 476 6303 ♦ yizhuo dot zhai at email dot ucr dot edu

## EDUCATION

---

<b>Xidian University</b>	<i>Xi'an, Shaanxi Province, P.R. China (Sept 2012 - June 2016)</i>
BS in Software Engineering	GPA: 3.82/4.0, 91/100 (ranked 1st)
<b>University of Limerick</b> (Study Abroad)	<i>Ireland (Sept 2015 - June 2016)</i>
<b>University of California Riverside</b>	<i>Riverside, CA (Sept 2016 - Present)</i>
PhD candidate	Co-advised by Srikanth V. Krishnamurthy and Zhiyun Qian
Computer Science	Overall GPA: 3.92/4.00 Expected Grad: June 2021

## TECHNICAL STRENGTHS

---

<b>Computer Languages(In order of strength):</b>	C++, C, Java, Python, Swift, Shell Script
<b>Software &amp; Tools</b>	LLVM, Linux, Clang, Hadoop

## SELECTED PROJECTS

---

<b>IncAnalyzer</b>	Sept 2019 - Current
<i>Research Project</i>	

- A framework to enable **incremental analysis** across different versions of the software.
- The analysis is applied to LLVM IR and aims to report bugs in a short time after the software release.
- Reducing the analysis time for large scale software and observe the lifetime of a bug.

<b>UBITECT</b>	Sept 2016 - Aug 2019
<i>Research Project</i>	

- Created a two-phase **program analysis tool** detecting use-before-initialization (UBI) bugs scaling to the whole **Linux kernel** in LLVM IR level.
- UBITECT first uses field-, flow-, context-sensitive analysis to generate potential warnings, then use **symbolic execution** to further reduce false positives.
- UBITECT successfully finds 138 new UBI bugs while 52 are confirmed by Linux maintainers.
- Paper under submission of CCS 2020 (Conference Website: <https://www.sigsac.org/ccs/CCS2020/>)

<b>LLVMCookBook</b>	April 2019 - Aug 2019
---------------------	-----------------------

- Established a llvm front end for the self-defined language in LLVMCookBook, registered new optimization passes in IR level.
- Refer, update and test the code in the book to be compatible with LLVM 7.0.0.
- Became more familiar with LLVM. While further understood how compiler front end, optimizer and back end works. (Github:<https://github.com/YizhuoZhai/LLVMCookBook>)

<b>Cat Classifier</b>	June 2019
<i>Deep Learning Project</i>	

- Applied **Logistic Regression**, **Two-layer Neural Networks** and **L-layer Neural Networks** to classify the cat vs. non-cat.
- Reach an accuracy of 80% by using L-layer Neural Networks.

<b>Router Malware Clustering</b>	Sept 2017 - Dec 2017
<i>Data Mining Class Project</i>	

- Clustering different kinds of router malware based on their execution trace.
- Two distinguished features are: the system call times and the memory usage over time, **dynamic time wrapping** is used to deal with the second feature.
- Eight clusters are calculated via the algorithm.

## CTF Style Binary Exploits

Jan 2017 - Mar 2017

### *Security Lab*

- The lab required student to understand both offensive techniques (e.g., how exploit works) and the defensive techniques (e.g., how to patch a vulnerability).
- Topics included stack overflow, heap overflow, format string, return oriented programming, etc.  
(Schedule:<https://www.cs.ucr.edu/~csong/secclab/17/cal.html>)
- Solved 80/100 challenges within 10 weeks.

## TowelRoot

Sept 2016 - Dec 2016

### *OS Class Project*

- Fully understand CVE-2014-3153 and can utilize it to compromise an Android device.
- CVE-2014-3153 shows some flaw when using Linux data structure. The logic is hard to understand while the proof of concept (PoC) is non-trivial.
- Get the root privilege of an Android device within 1 minutes.

## Voter

Oct 2013 - Nov 2013

### *Science Society Project*

- An Android app which creates a vote and visualizing the voting result.
- This is a project of the college science society, students work in group to come up with their own ideas and build an Android app within one month.
- Successfully implement the Voter using Java and demonstrate it in the final meeting.
- Github:<https://github.com/brotherroot/Voter> (Contributor: aiweiyangxiao)

## SELECTED VOLUNTEER WORK

---

### UCR MESA

Sept 2017 - Current

I currently work as a volunteer for the UCR MESA (<https://mesa.engr.ucr.edu>) events. I mainly help with the middle school and high school technique competitions.

- 6/2018 GEMS(Girls Excelling in Mathematics and Succeeding) events: Student Organizer
- 3/2018 2018 Seaperch Competition: Runner
- 2/2018 MESA Day: Judge for High School NEDC (National Engineering Design Competition)
- 11/2017 MESA Robotics Invitational: High School Judge

## SELECTED CLASSES

---

**System:** Advanced OS, Program Verification, Advanced Compiler Construction, Computer Security  
**AI:** Machine Learning, Data Mining, Artificial Intelligence, Probablistic Module of AI

## NOTABLE AWARDS

---

09/2016 Dean's Distinguished Fellowship	10/2014 Special Scholarship by college
06/2016 President's Volunteer Award (Bronze)	10/2013 First Prize Scholarship by college
04/2015 First Prize Scholarship by college	03/2013 Special Scholarship by college
10/2014 National Scholarship	
05/2014 Third Prize in the 12th "Huawei Cup" Programming Competition
